DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-12, 27, drawn to a process for propagating a mutant herpes virus and a composition prepared by the process.

Group II, claim(s) 14, 19-20, 22, drawn to a cell line.

Group III, claim(s) 15, 19, 21, 22, drawn to another cell line.

Group IV, claim(s) 16, drawn to another cell line.

Group V, claim(s) 17-25, drawn to another cell line.

Group VI, claim(s) 26, drawn to a virus.

The inventions listed as Groups I-VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature of the instant application is directed to produce a herpes simplex virus, which lacks the functional VP16 gene in a mammalian cell, wherein the VP16 is supplied by trans from the VP16 gene transfected cell line. However, this technical feature has already been taught in the prior art as evidenced by Weinheimer et al. (a, J. Virol. 1992, Vol. 66, pp. 258-269) and (b, Molecular Medicine Today September 1997, pages 404-411).

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species for the HSV VP16 homologue supplied by trans as listed in claims 3, 4 and 21, are as follows:

- 1). Equine herpes virus 1 gene 12, and
- 2). Bovine herpes virus gene BTIF.

The species for the additional nucleotide acid sequence listed by claims 9-10, 24, and 25 are as follows:

- a). HSV-1 ICP27,
- b). HSV ICP4

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: different species are directed to the structurally and functionally different biological molecule that can not link the invention together with same biological structure and function.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
